### **General Description of the Programme** -

This programme is for use by the ORGAN DONATION REGISTRY for data entry purposes through the collection of Screens, and access to analysing the data through the enclosed Tables, as described in the Data Dictionary, using the Structured Query Language (SQL).

The current database has been modified to cater for alterations and new information collected from January 1<sup>st</sup> 1998.

Screens for data entry have been redesigned where new fields have been added. A complete set of designs incorporating data from each Table is enclosed.

The addition of new fields and alterations to various Tables for the ORGAN DONATION REGISTRY Database Programme includes testing and linking these modifications and additions with the existing Database requirements to produce a working programme.
