

CHAPTER 2

Prevalence of Kidney Failure with Replacement Therapy

Summarising the number of prevalent kidney replacement therapy patients in Australia and New Zealand, the prevalence rate per million population and the demographics and clinical characteristics of prevalent patients.

Summary and Highlights

The prevalent patients undertaking Kidney Replacement Therapy (KRT) in Australian and New Zealand continues to steadily increase. This peaked in 2021 with 28542 people (1109 per million population) in Australia and 5452 (1054 per million population) in New Zealand on KRT. The greatest proportion of people are those aged 75-84 in Australia with a prevalence of 3083 per million population, whereas in New Zealand this is those aged 65-74 with a prevalence of 2682 per million population.

The burden of kidney disease for those on KRT disproportionately impacts first nations people. The prevalence of Aboriginal and Torres Strait Islander people on dialysis is 2455 per million population compared with 511 per million population for people who are not Aboriginal and Torres Strait Islander ethnicity. Similarly, the prevalence in Māori people on dialysis is 1129 per million population compared with 496 per million population non-Māori people.

Overall, there are a greater number of prevalent patients being treated with kidney transplantation compared with dialysis, with haemodialysis being more common than peritoneal dialysis. For dialysis patients, satellite haemodialysis is the most common location of dialysis followed by hospital dialysis. The number of people with co-morbid conditions undergoing KRT continues to decline, apart from type 2 diabetes mellitus which continues to increase.

All Kidney Replacement Therapy Modalities

Table 2.1 shows the number of prevalent patients treated with kidney replacement therapy (KRT) in Australia and New Zealand over the last 20 years. The prevalence per million population (ppm) is also shown. Table 2.2 shows the same data for the last 5 years, but with dialysis modality categorised.

Population estimates for Australia and New Zealand used throughout this chapter for the calculation of prevalence per million population were sourced from the Australian Bureau of Statistics (2021)¹ and Stats NZ (2021)².

Table 2.4 shows the prevalence (pmp) of KRT by state/territory over 2017-2021. State is based on the state of the treating hospital*.

*NSW population estimates exclude residents of the NSW South Eastern region which includes the local government areas of Bega Valley, Eurobodalla, Goulburn Mulwaree, Hilltops, Queanbeyan-Palerang Regional, Snowy Monaro Regional, Upper Lachlan Shire and Yass Valley. ACT population includes residents of the NSW South Eastern region. The population base for the NSW South Eastern region is based on the estimated resident population by local government area from the Australian Bureau of Statistics (2022)³.
